Interact Fire Solutions Offers RIBA Approved CPD On Fire Protection

Interact Fire Solutions is offering RIBA-assessed CPD seminars on its fire protection systems for structural steelwork.

As a manufacturer of cast epoxy intumescent protection for columns and features, Interact Fire Solutions has an in-depth understanding of the systems available to Designers and their benefits.

The seminar covers the specification of fire protection for structural steel, demonstrates the way intumescent materials work, and the areas where some systems can fall short. Methods for fulfilling fire protection criteria to Approved Document B of the Building Regulations are discussed, and systems for protecting structural steel in all types of building, from hospitals and schools to offices and shopping malls.

The CPD seminar will benefit those involved with tall buildings. Interact were exhibitors at the London conference on Tall Buildings and sponsors of the Dubai conference, "Building Tall" at the end of January 2007. Interact have been invited to present the keynote speech at the Tall Building conference in Shanghai in July.

To plan a CPD seminar on this important topic, please contact Interact Fire Solutions via 01694 751394 or info@interactfire.co.uk.
