Interact Fire Solutions Exhibits Globally

The news is that Tall buildings are in, and London is about to host its second tall buildings conference in two years. There are conferences and exhibitions all over the world including Shanghai, Dubai and London this year.

Interact Fire Solutions Ltd have exhibited in both London and Dubai, sponsoring

meets these criteria. An epoxy casting made by Interact Fire Solutions and traded as “Interactive Columns” is the material of the future when all the issues of longevity, aesthetics and maintenance costs are assessed.

So it is not surprising that Interact chooses to pass on the big exhibitions where it would get lost among the plethora of products and instead exhibits this niche product at the niche venue discussing the very concerns for which Interactive Columns provides the solution – fire protection for tall buildings.

For more information – www.interactfire.co.uk

the latter, and are only passing on the Shanghai conference because it clashes with the London conference at the end of May.

Tall buildings are high value infrastructure projects which require special attention. Unlike standard builds the design criteria includes life of building, security and aesthetics which reflect the high profile of these building projects.

The revolution in epoxy fire protection
